

Do you want to have the power to design and evaluate cutting-edge optical imaging systems? If so, you should take the ECE595 Optical imaging system design in Spring 2025, which is offered only in the spring semester of odd years.

Such expertise is widely used in both academia and industry. E.g. ASML, Apple, Facebook, Illumina, Carl Zeiss, JPL, NASA, Agilent, and Rivian.

**Learning Outcome:** Thoroughly understand the process of optical imaging system design and acquire the skills to carry out the practical design using common commercial design software (Zemax).
